

Foundation Drainage Systems Michigan Residential Code 2003 - Section R405.1

A drainage system is required for concrete or masonry foundations that retain earth and enclosed habitable or usable space located below grade.

A foundation drainage system is not required if the soils for the site are Classified as Class 1 under the Unified Classification System.

The following are diagrams based on the written language of Section R405.1.

If using a drain tile.

If using a gravel, crushed stone, or other approved material as a drain
